

A function is **one-to-one** if both the function and its inverse are functions.

- 1) Adam and Eve are working on a homework assignment in which they must identify all functions that are one-to-one functions. Adam says that all linear functions are one-to-one functions so they don't even need to look at the linear functions. Eve disagrees, and says that not all linear functions are one-to-one functions. Who is correct? Explain how you determined which student is correct.

2) For each given function do the following:

- Complete a table of values for the function and its inverse.
- Use the coordinate plane shown to sketch the graph of the **function** using a **solid** line. Then sketch the **inverse** of the function on the same coordinate plane using a **dashed** line.
- Determine whether the function is a one-to-one function. Explain your reasoning.

<p>a. $f(x) = 3x - 6$</p> <table border="1" style="width: 100%; border-collapse: collapse; margin-bottom: 10px;"> <thead> <tr> <th style="width: 30%;">x</th> <th style="width: 70%;">f(x)</th> </tr> </thead> <tbody> <tr><td>-2</td><td></td></tr> <tr><td>-1</td><td></td></tr> <tr><td>0</td><td></td></tr> <tr><td>1</td><td></td></tr> <tr><td>2</td><td></td></tr> </tbody> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 30%;">x</th> <th style="width: 70%;">Inverse of f(x)</th> </tr> </thead> <tbody> <tr><td></td><td>-2</td></tr> <tr><td></td><td>-1</td></tr> <tr><td></td><td>0</td></tr> <tr><td></td><td>1</td></tr> <tr><td></td><td>2</td></tr> </tbody> </table>	x	f(x)	-2		-1		0		1		2		x	Inverse of f(x)		-2		-1		0		1		2		<p>Is the function $f(x)$ a one-to-one function?</p>

3. Use the word bank to complete each sentence.

Always

Sometimes

Never

a. A linear function is _____ a one-to-one function.

b. An exponential function is _____ a one-to-one function.

c. A quadratic function is _____ a one-to-one function.

d. A linear absolute value function is _____ a one-to-one function.
