

Students in a South Central High School mathematics class decided that their term project would be a study of strictness of the parents or guardians of students in the school. Their goal was to estimate the proportion of students in the school who thought of their parents or guardians as “strict”. They do not have time to interview all 1000 students in the school, so they plan to obtain data from an online questionnaire.

1. What type of study is this?
2. Describe the characteristic of interest.
3. Identify the population.
4. Identify the sample.
5. State any bias you think might occur in this study.
